PENETRATION TESTING & SECURITY ENGINEERING SINCE 2013

www.danielyan.com

Certificate of Penetration Testing

This is to certify that

**Clinical Informatics Research Unit
University of Southampton**

have commissioned penetration testing of the following application/infrastructure:

EDGE3 Web application and API

and within the scope agreed no significant or material weaknesses have been identified or all such weaknesses have been adequately addressed and re-tested.

Date of issue: **29 September 2023**

Date of expiry: **29 September 2024**

Re-testing is recommended by the expiry date or after any significant change that may affect the security of the application(s) or the underlying infrastructure. Penetration testing is a point in time assessment and is not guaranteed to identify all security weaknesses or vulnerabilities that may exist. No assessment can guarantee completely secure operation of the application(s) or infrastructure due to external dependencies and trust relationships between software components. Changes in the application(s), software components and/or the underlying components may introduce weaknesses absent at the time of testing. The above particulars are correct as of the specified date and no representations or warranties are made regarding the future security or otherwise of the tested application(s) or infrastructure.
